

LETTER FROM THE FOUNDER

Dear Bitcoiner,

Congratulations on taking this step. You've already completed your personalised setup, which means you have a clear picture of your situation and a personalised guide to work from. That is the hardest part done.

The My Bitcoin Will Starter Kit exists because traditional estate planning falls short for bitcoin holders. A valid Will is essential, but it rarely provides enough clarity for your Executor or beneficiaries to actually act when it matters. This kit bridges that gap by combining your legal documents, supporting information, and practical access guidance in one place.

Important: This kit is not a substitute for legal, financial, tax, or technical advice. It is a practical tool to help you organise your intentions and information clearly. You remain responsible for your decisions, your appointments, and how you store and communicate important details.

HOW TO USE THIS KIT

Your personalised PDF is your guide through the kit. Keep it open as you work. It reflects the decisions you made during setup and tells you exactly what to complete and what applies to your circumstances.

The **Companion Guide**, **Founder Letter**, and **Table of Contents** are accessible as tabs within your personalised setup link. Use the **Companion Guide** as your detailed reference whenever you have questions about a decision, a trade-off, or how the documents work together.

Work through your 5 core documents in order. Do not rush. The decisions you are making are legally binding.

ABOUT THE DOCUMENTS IN THIS KIT

The documents are designed to complement each other.

Your **Will** is the primary legal document for recording your wishes and appointing your Executor. The **Letter of Wishes** is a private document that provides your Executor with guidance and discretion, particularly around your bitcoin.

The **Digital Asset Inventory** records what you hold and where it is. The **Technical Roadmap** records the practical access information your Executor

will need. Completing it is strongly recommended. Without access information, your other documents cannot do their job.

The **Beneficiary Personal Message and Education Guide** gives your beneficiaries the context they need to understand and handle what they inherit.

Supporting your completion of the kit, the **Bitcoin Estate Administration and Executor Education Guide, Kit Completion Checklist, Signing Ceremony Checklist**, and **Annual Review Worksheet** are there to help you finalise, sign, and maintain your plan over time.

A FEW IMPORTANT PRINCIPLES

Keep legal authority separate from access information. Your Will is the core legal document. Your Technical Roadmap holds the access information. These must never be stored together. Be selective about what you record, where you store it, and who might one day read it. A strong estate plan is legally effective, clear, practical, and usable when it matters most.

If your situation involves complex legal, tax, trust, superannuation, or cross-border issues, seek professional advice. Ensure your Will is signed according to the legal requirements that apply in Australia. The Companion Guide and checklists will assist, but the final responsibility remains yours.

FINAL THOUGHT

I built My Bitcoin Will for the community I am part of, and your trust means a great deal to me. I want this kit to deliver real value and genuine peace of mind for your self-custody journey. If you are not entirely satisfied within the first 30 days, I will provide a 100% refund, no questions asked.

I would love your feedback, good or bad. Thank you for coming on this journey with me.

Dale Warburton

Founder & CEO, **My Bitcoin Will**
